

Ham radio is a valuable service in times of emergency and is a great hobby. As a new ham, I urge you to not allow PLC. RFI caused by PLC will render the HF bands useless, as I understand it. Can you state without any reservation, that HF communication will not be effected by PLC.

We have may ways to access the internet, but hams have limited HF allocations and without it the hobby is dead and I think world wide communication would suffer.

Recpectfully submitted,

William P. DeLoach K4QCD
